**Operations,
Contingency Plans and Mobilization**

**Department of the Army
Mobilization Processing System (DAMPS)**

**CPT Melissa Mitravich
DAMO-ODM, G-3**

Unclassified

January 2008

- DAMPS (Department of the Army Mobilization Processing System)

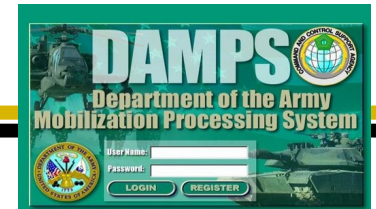

DEFINITION: The DAMPS application provides DA and its subordinate commands the capacity to track mobilization requests and approval process. DAMPS also provides a central mobilization process for HQDA and other Army elements that manage and or control mobilization of RC personnel.

- CPT Mitravich, DAMPS Program Manager
- Mike Karaginnas Data Support and Development MKCGS
- Larry Kendrick Data Support and Development MKCGS
- Dan Lehman Data Support and Development MKCGS

G-33

DAMPS (SIPRNET)

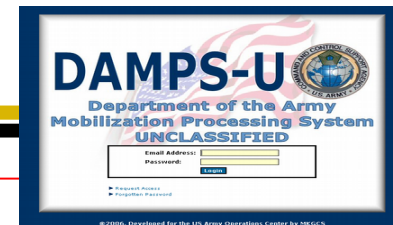

- Created to meet three core Requirements:
 - **Automation** of the staffing, approval and publication process for all Army mobilization actions, providing real time visibility of the processing of over 800 mobilization requests per month
 - Capture relevant information in a **Database** to support reports and analysis
 - **Reconciliation** of Soldiers actually mobilized to HQDA authorizations
- Large gains in efficiency: enables surge, reduces man hour costs by decreasing labor needed to move requests through the validation process, expedites processing times by more than half
- **DAMPS is the cornerstone of the concept to resolve the Mobilization Accountability Material Weakness:** As HQDA orders are generated, Data is passed from DAMPS through 1A to G1 systems, enabling the lashing of requirements to individual orders and establishing a key field to track soldiers through the mobilization cycle
- Data reconciled via integration of DAMPS and other Army systems provides the basis for the MOBCOP (ACP DP 66.2)

<https://www.armyc2apps.hqda.army.smil.mil>

G-33

DAMPS-U (NIPRNET)

- Created to meet the following core requirements:
 - **Automation** of generation of 1A Mobilization Orders and passage to RRCs and JFHQs
 - **Update specific data fields** at 1A with latest information where appropriate: (MOBSAD, Mob Station, Operation fund site)
 - Create a data store for “pass through” of Mobilization data from G3 systems to G1 systems
- DAMPS-U resides on NIPRNET, and will be expanded to enable passage of data from “low” to “high” via web services to enable integration of unclassified systems with classified systems in the SIPRNET environment (Presently a barrier to G3 / G1 system integration)
- DAMPS-U dramatically increased efficiencies and reduced man hours required to process CONUSA unit mobilization orders (over 1000 orders generated per month. Implementation was staged to facilitate the transition of all CONUSA level mobilization actions to 1A

G-33 Mobilization Applications

WHERE WE WERE POST 9/11

WHERE WE ARE TODAY

Average of 120 mobilization actions per month	Average of 850 of mobilization actions per month
~3 weeks from generation of mobilization request to publication of DA mobilization order	~1 week from generation of mobilization request to publication of DA mobilization order
All data hand entered into stove piped, access database (poor data integrity, no connectivity to other databases, no visibility outside AOC)	DAMPS and DAMPS-U web based and integrated with other Army systems including MDIS, ITAP, ASORTS
No visibility on status of mobilization request outside of the AOC until HQDA Order published	Real time visibility of mobilization requests from initiation to approval and archive; visible to all with permissions; liberal permissions policies
HQDA and CONUSA Orders hand-typed into WORD document causing errors in the order itself and inconsistent archiving of data after the publication of orders	Orders generated by drawing data from the approved request with minimal manual input at the front end of the process and fields populated by authoritative db's where applicable
Lag-time between generation of HQDA, CONUSA and Individual orders. Significant manpower and time required to produce hand-typed orders at both HQDA and CONUSA	Data passed from HQDA to 1A within minutes, CONUSA orders cut and data passed to individual orders systems within hours of the publication of the DA mob order

G-33 Mobilization Applications

WHERE WE WERE POST 9/11

16 mobilized reservists at ~150K per year
processing mobilization actions at HQDA

8 action officers at 1st Army and 5th Army to
generate all CONUSA mob orders

**Bottom-line: slow, inefficient, not
visible, costly, many
amendments**

WHERE WE ARE TODAY

9 mobilized reservists at ~150K per year
processing mobilization actions at HQDA

2 action officers at 1st Army to generate all
CONUSA mob orders

**Bottom-line: Systems have paid for
themselves and enabled Army
to meet surge of requests-
sheer numbers would otherwise
have dictated an increase in
AOs, vice draw down**

G-33 **CURRENT REQUEST PROCESS**

DAMPS: Data entered once

Force provider creates “packet” with unit data in DAMPS then forwards electronically to HQDA

➤ MOB DIV manages electronic mob packet

G-33 Law, OSD Policy & Execution

Law

Jan 53 **10 USC 12302** "Not more than 24 **consecutive** months"

Policy

Sep 01 **Mobilization Policy Memo from USD(P&R) to the Assistant Secretaries** "No member of a Reserve Component called to involuntary active duty under 10 USC 12302...shall serve on active duty in excess of 24 months...as long as the total of **combined periods** of service (**cumulative**)...does not exceed 24 months."

Jan 07 **Utilization of the Total Force Memo from Sec Def to Secretaries of the Military Departments** "From this point forward, involuntary mobilization for members of the reserve forces will be for a maximum of one year at any one time." (**consecutive**)

Execution

Sep 01 All involuntary remobilizations approved by SECDEF

Oct 05 **No** involuntary remobilizations

Jan 07 Maximum duration of RC mobilizations is 400 days (allowing for individual training and post-mobilization leave)

Effects

Sep 01 Dependant on volunteers and cross-leveling
Non-cohesive units

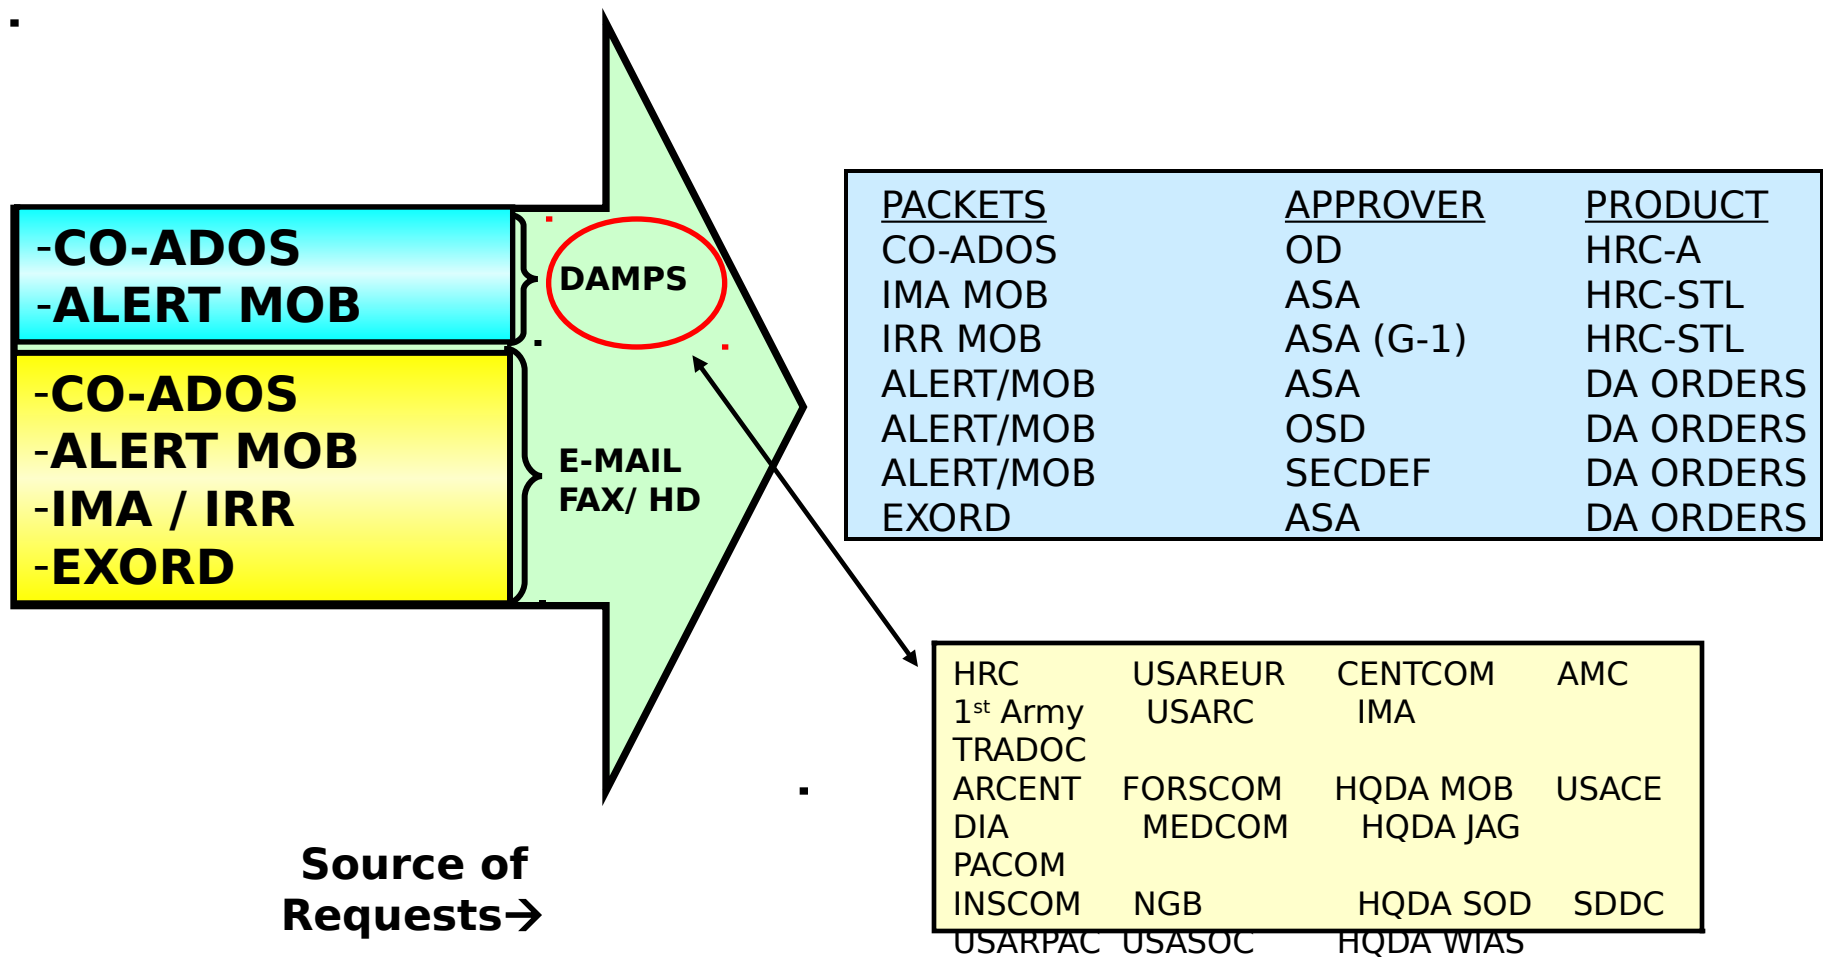

No assured access to the RC
Unready units and equipment

Jan 07 Varying BOG lengths for RC units
Access to RC units

G-33

Material Weakness

Material Weakness: Reserve Component (RC) Mobilization Accountability must provide better integrated management controls for tracking RC personnel in the “mobilization pipeline”

Available automated management tools lack synchronization/integration. Particular concern must be placed on tracking RC personnel:

- From Home Station through the Mobilization Station
- Into the Theater of Operations
- Through Deployment
- During Redeployment
- During De-mobilization/Release from Active Duty (REFRAD)

G-33

Objectives of Resolution

Gains of resolving weakness: Visibility and Reconciliation

The Army must develop the ability to reconcile mobilization authorizations with actual individual mobilizations to:

- Provide visibility of individual remobilizations and effects on unit readiness during the sourcing process
- Provide data to other organizations in order to allow those organizations to reconcile mobilized soldier data in other systems such as: Mobilization and Deployment Tracking Information System (MDIS), Defense Finance and Accounting System (DFAS), Electronic Military Personnel Office (eMILPO), Deployment and Reconstitution Tracking Software (DARTS), Defense Manpower Data Center (DMDC), Deployed Theater Accounting Software (DTAS), Soldier Financial Readiness Visibility System (SFRVS) and others
